**“How much meat to buy?”** This is a rough estimate of how much raw, gross weight per person you’d need. Adjust as needed for heavy vs light eaters, kids, leftovers, or more than one meat at the meal.

To figure final pounds needed, multiply weight per person by number of people, and divide by 16 oz in a pound. This is your needed weight.  
(Example- 20 people X 12 oz Prime Rib = 240 oz.  
240 oz divided by 16 oz = 15 lbs)
